

Simplest one

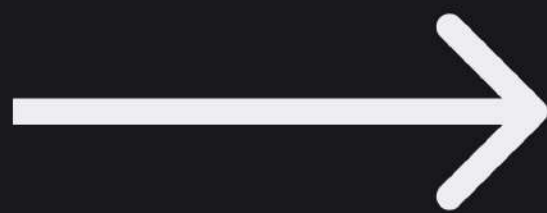

To Audit Log

Your
Django App

#pythonworld

django-easy-audit package
provides the simplest way to
audit log your django app

1. Install the package

We need to install **django-easy-audit** package by just hitting this command in terminal

```
pip install django-easy-audit
```

2. Add in installed apps

open settings.py file and add **easyaudit** in **installed_apps**.

```
settings.py

INSTALLED_APPS = [
    ...
    'easyaudit',
]
```

3. Add to Middleware

Add django-easy-audit's **middleware** to your

settings.py

```
MIDDLEWARE = (  
    ...  
    'easyaudit.middleware.easyaudit.EasyAuditMiddleware',  
)
```

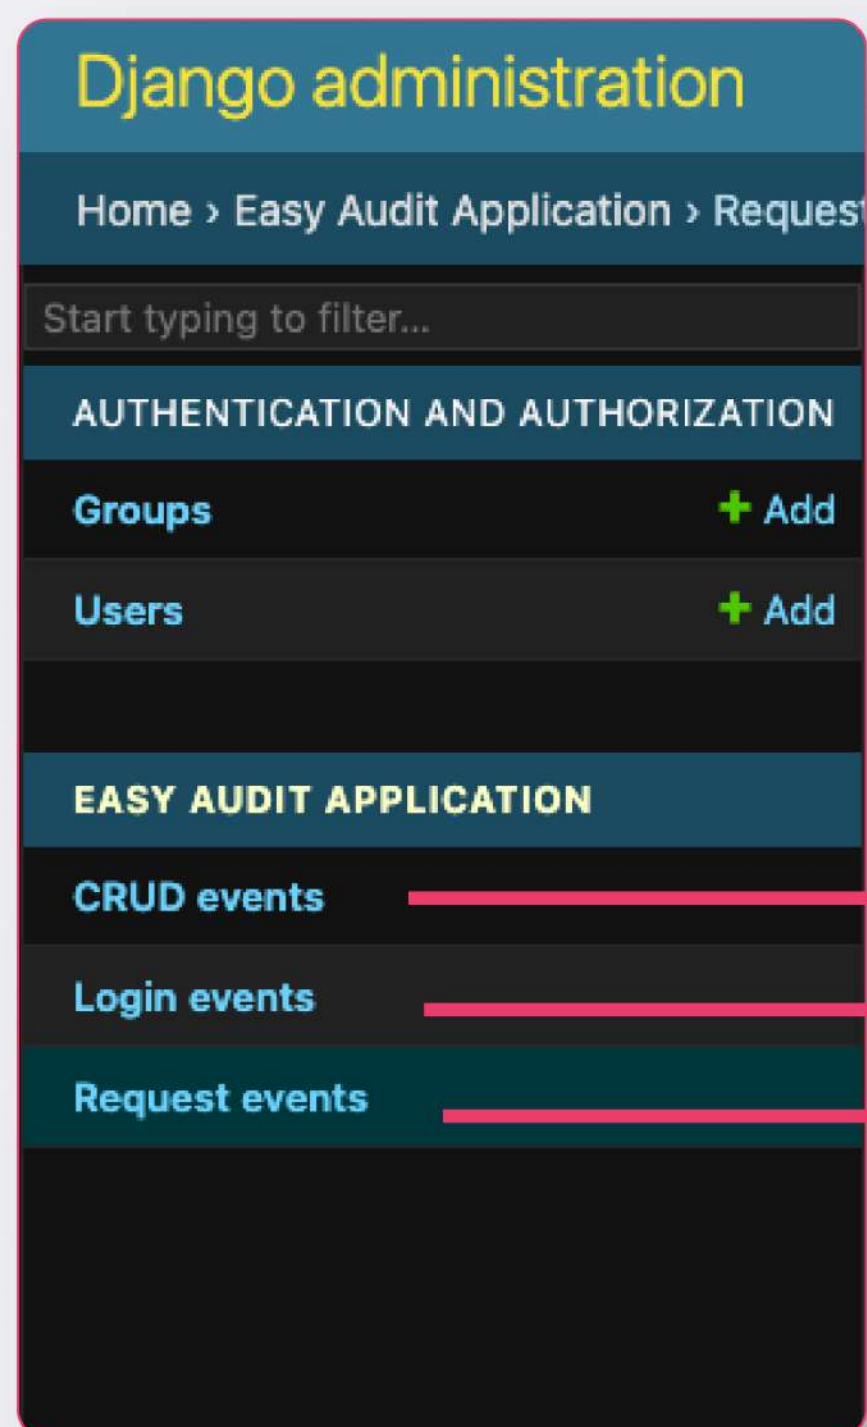

4. Migrate Database

Simply hit the **migrate** command to create the **audit models**.

```
python manage.py migrate easyaudit
```

5. Open django admin

Open django admin and here you can see these table, that will log the app history :

CRUD events, that will store the crud operations logs.

Login events, that will store the login, login failed, logout history logs.

Request events, that will store the logs of request events.
