

How to

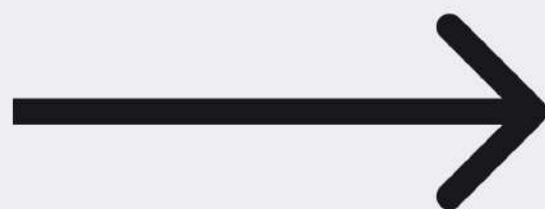

**Graph A Model**

# Structure In Django

#pythonworld

**Django-schema-graph** makes a colourful diagram out of your Django models. The diagram is interactive, and makes it easy to toggle models and apps on/off at will.

## 1. Install the package

We need to install **Django-schema-graph** package by just hitting this command in terminal

```
pip install django-schema-graph
```

## 2. Add in installed apps

open settings.py file and add `schema_graph` in `installed_apps`.

settings.py

```
INSTALLED_APPS = [
    ...
    'schema_graph',
    ...
]
```

### 3. Add to your URLs.

Open `urls.py` file of `root app` and add this to your urls file.

urls.py

```
from schema_graph.views import Schema
from django.urls import path

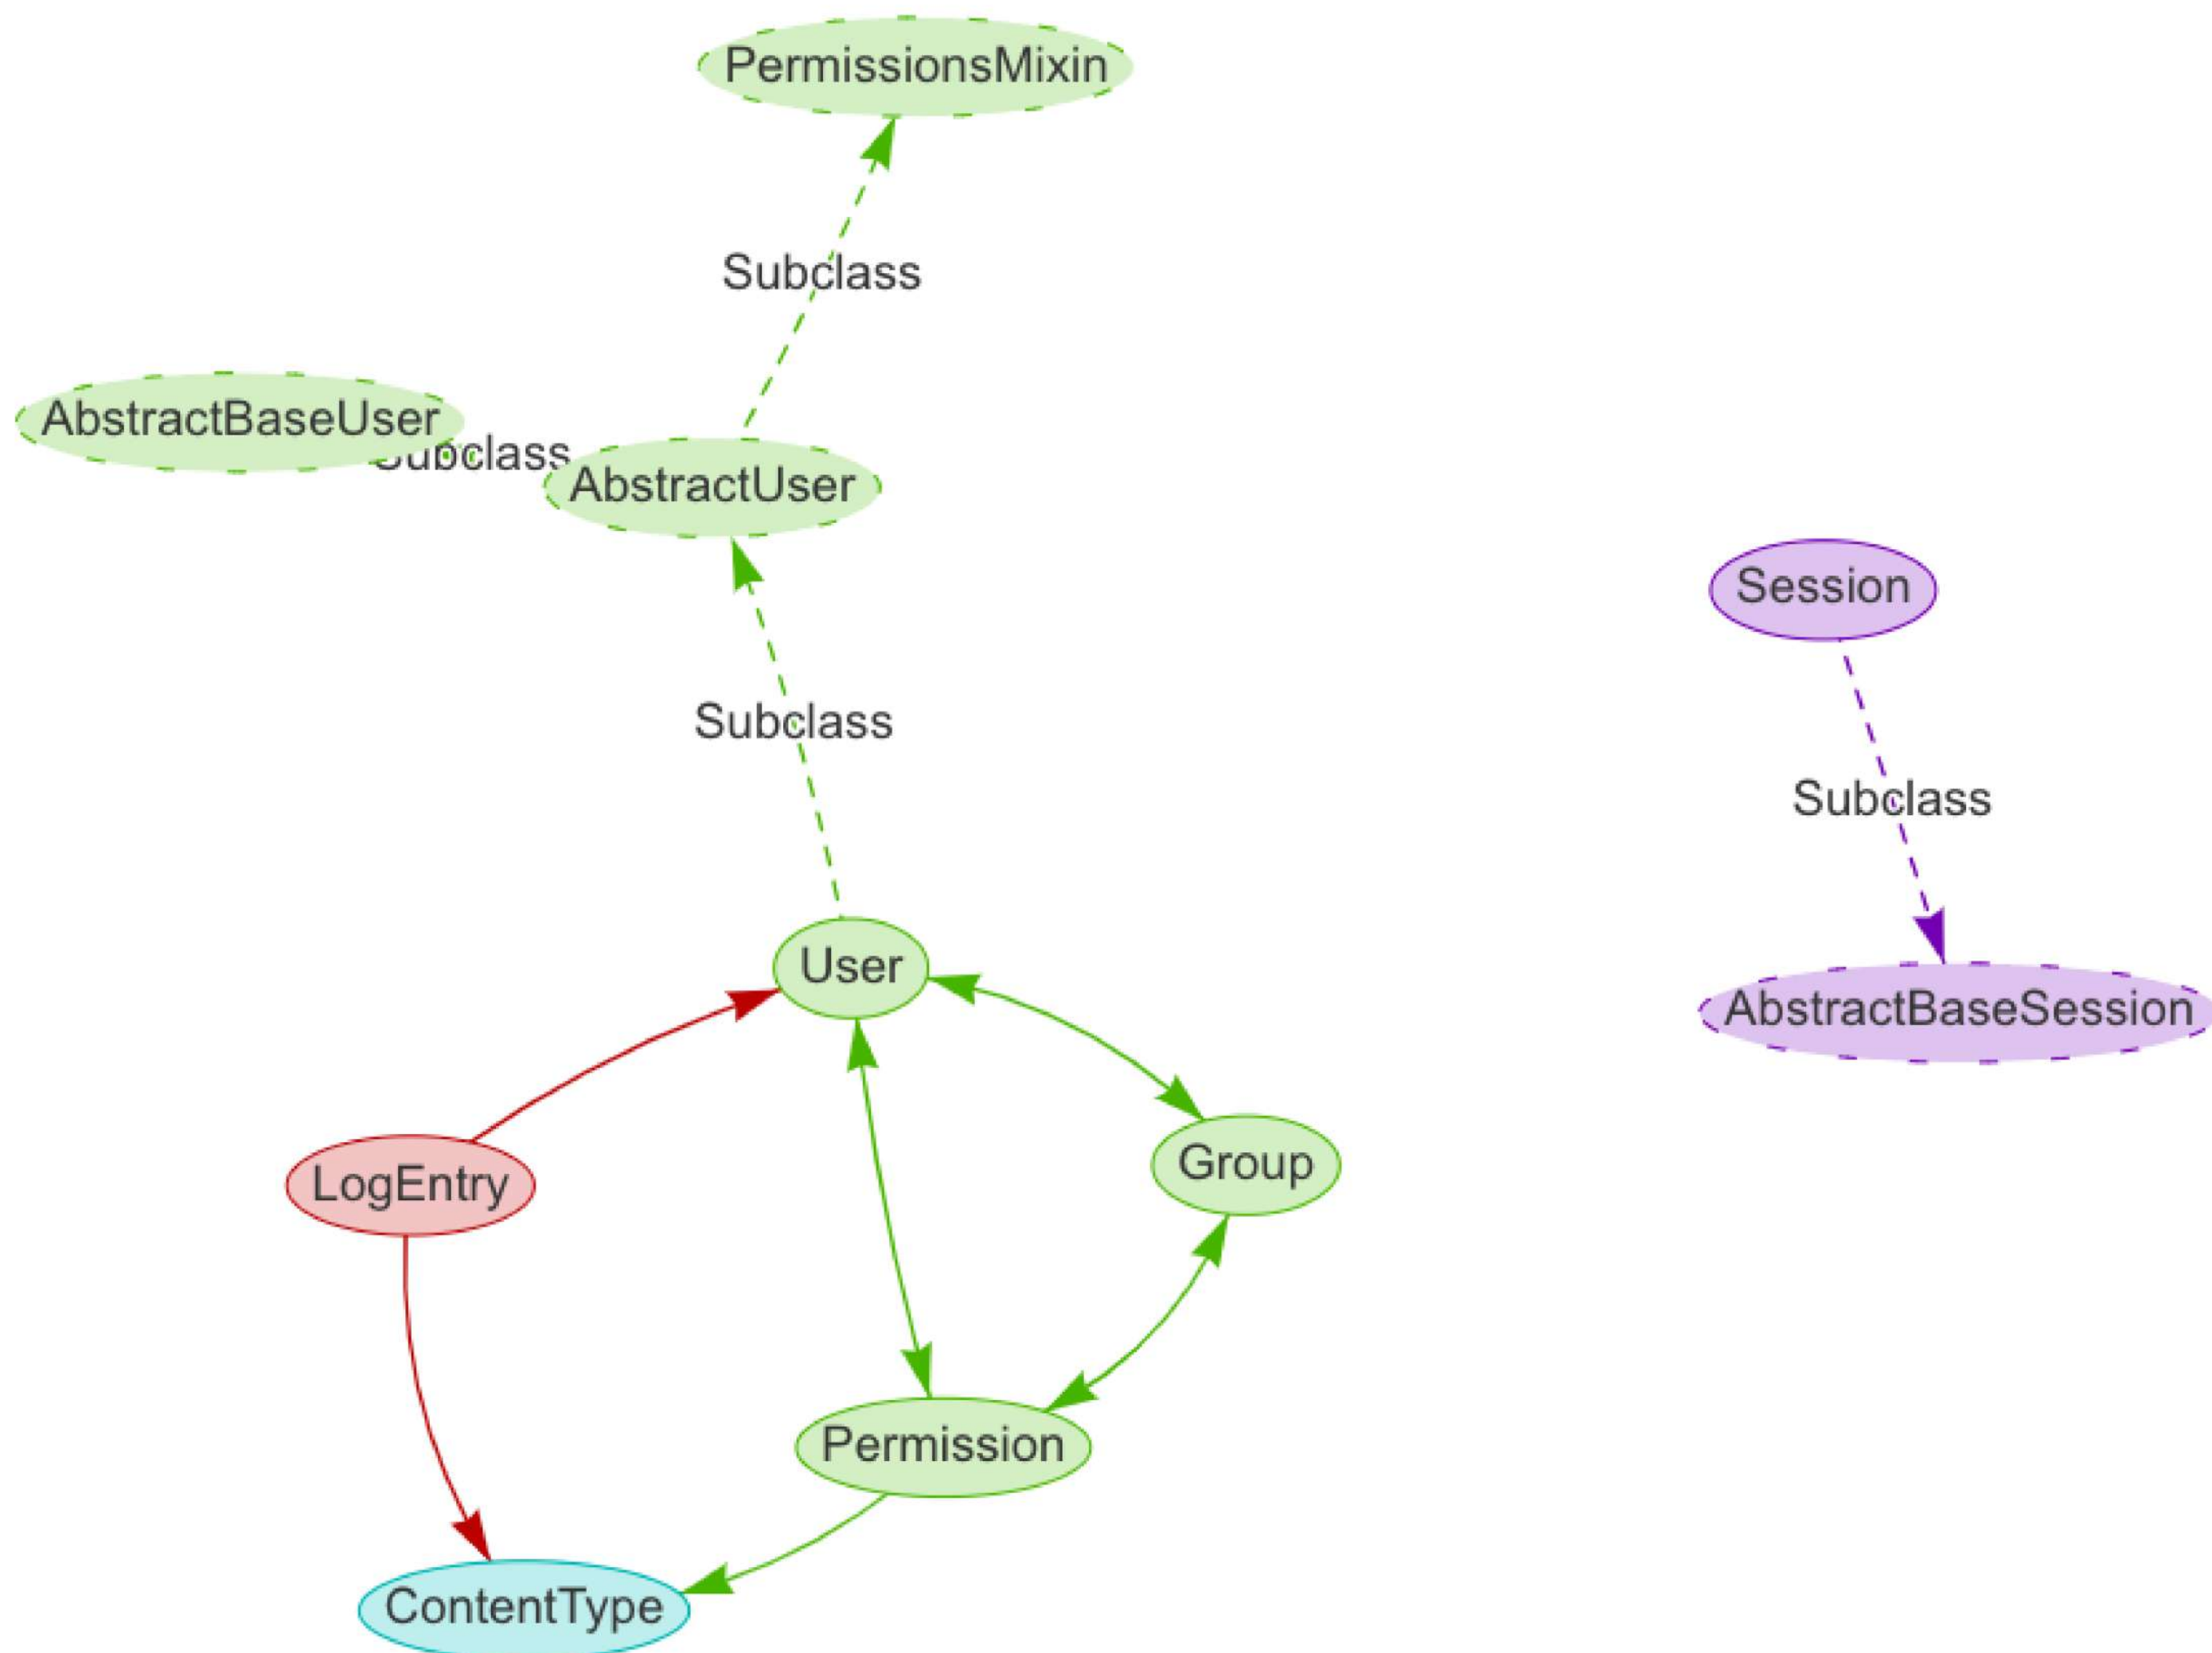

urlpatterns += [

    # On Django 2+:
    path("schema/", Schema.as_view()),

    # Or, on Django < 2:
    url(r"^schema/$", Schema.as_view()),

]
```

Open <http://127.0.0.1:8000/schema/> this url in browser
