

How to add

Country Fields

In Django
Models

Introduction...

A **django-countries** package that provides country choices for use with forms, flag icons static files, and a country field for models.

Let's install the package

We need to install **django-countries** package by just hitting this command in terminal.

```
pip install django-countries
```

Add to INSTALLED_APPS

We need to add `django-countries` to `INSTALLED_APPS` in `settings.py` for your project:

settings.py

```
INSTALLED_APPS = [  
    ...  
    'django_countries'  
    ...  
]
```

Let's create a model

Open `models.py` file and add this `CountryField()` to your model.

models.py

```
from django.db import models
from django_countries.fields import CountryField

class Person(models.Model):
    name = models.CharField(max_length=100)
    country = CountryField()
```

models.py

```
from django.db import models
from django_countries.fields import CountryField

class Person(models.Model):
    name = models.CharField(max_length=100)
    country = CountryField(multiple=True)
```

You can even select multiple countries, just have to
multiple = True

Register your model

open `admin.py` file register the model.

admin.py

```
admin.site.register(Person)
```

Country Field

Person object (1)

Name:

Aashish Kumar
