

How To

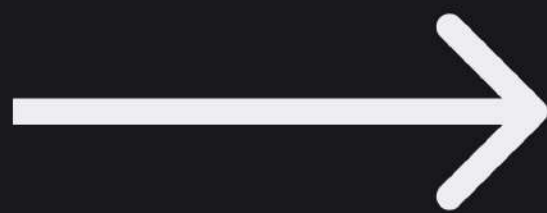

Import / Export

**Data From
Django Admin**

#pythonworld

django-import-export is a Django application and library for importing and exporting data with included admin integration.

1. Install the package

We need to install **django-import-export** package by just hitting this command in terminal

```
pip install django-import-export
```

2. Add in installed apps

open settings.py file and add `import_export` in `installed_apps`.

settings.py

```
INSTALLED_APPS = (  
    ...  
    'import_export',  
)
```

3. Create Model

Open **models.py** file, & let's create a simple **model** first

models.py

```
from django.db import models

class Foo(models.Model):
    name = models.CharField(max_length=100)
    is_true = models.BooleanField(default=False)
```

4. Register Model

Open **admin.py** file and register your model

```
admin.py

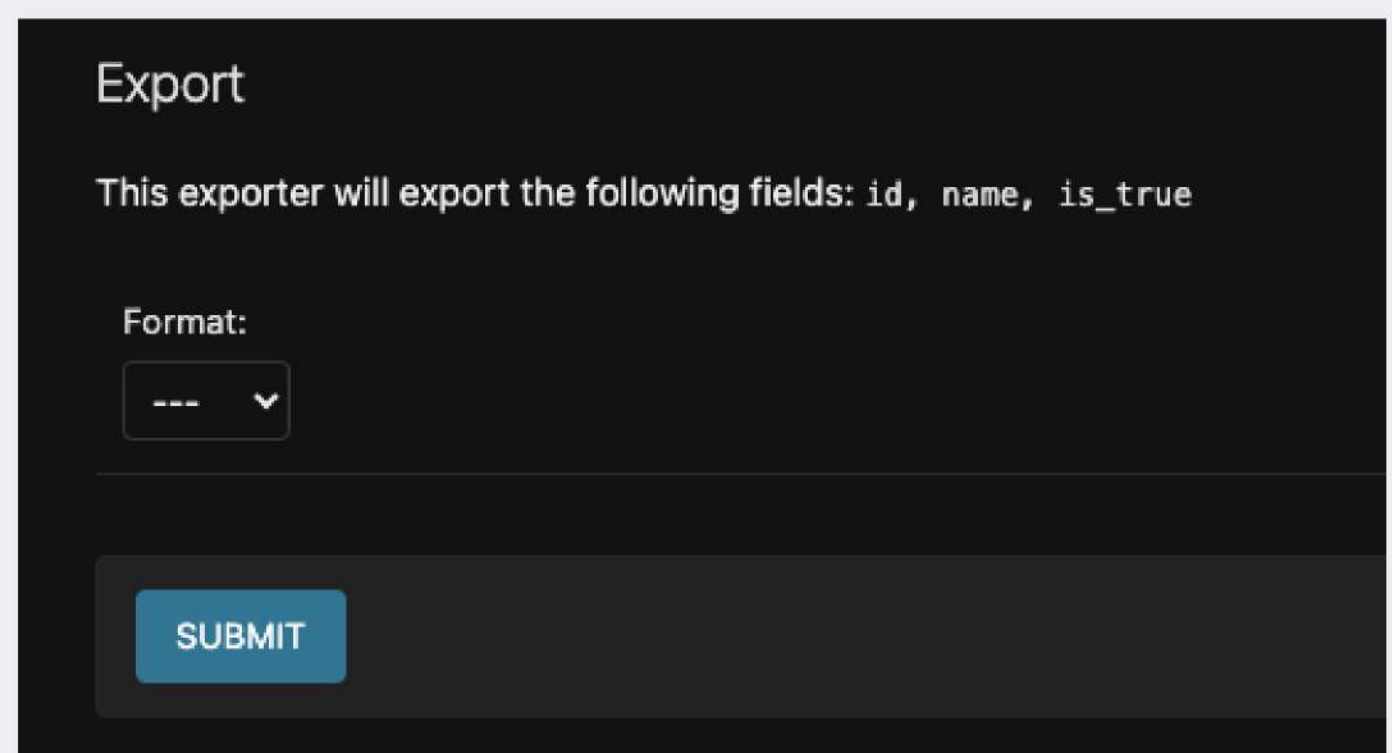

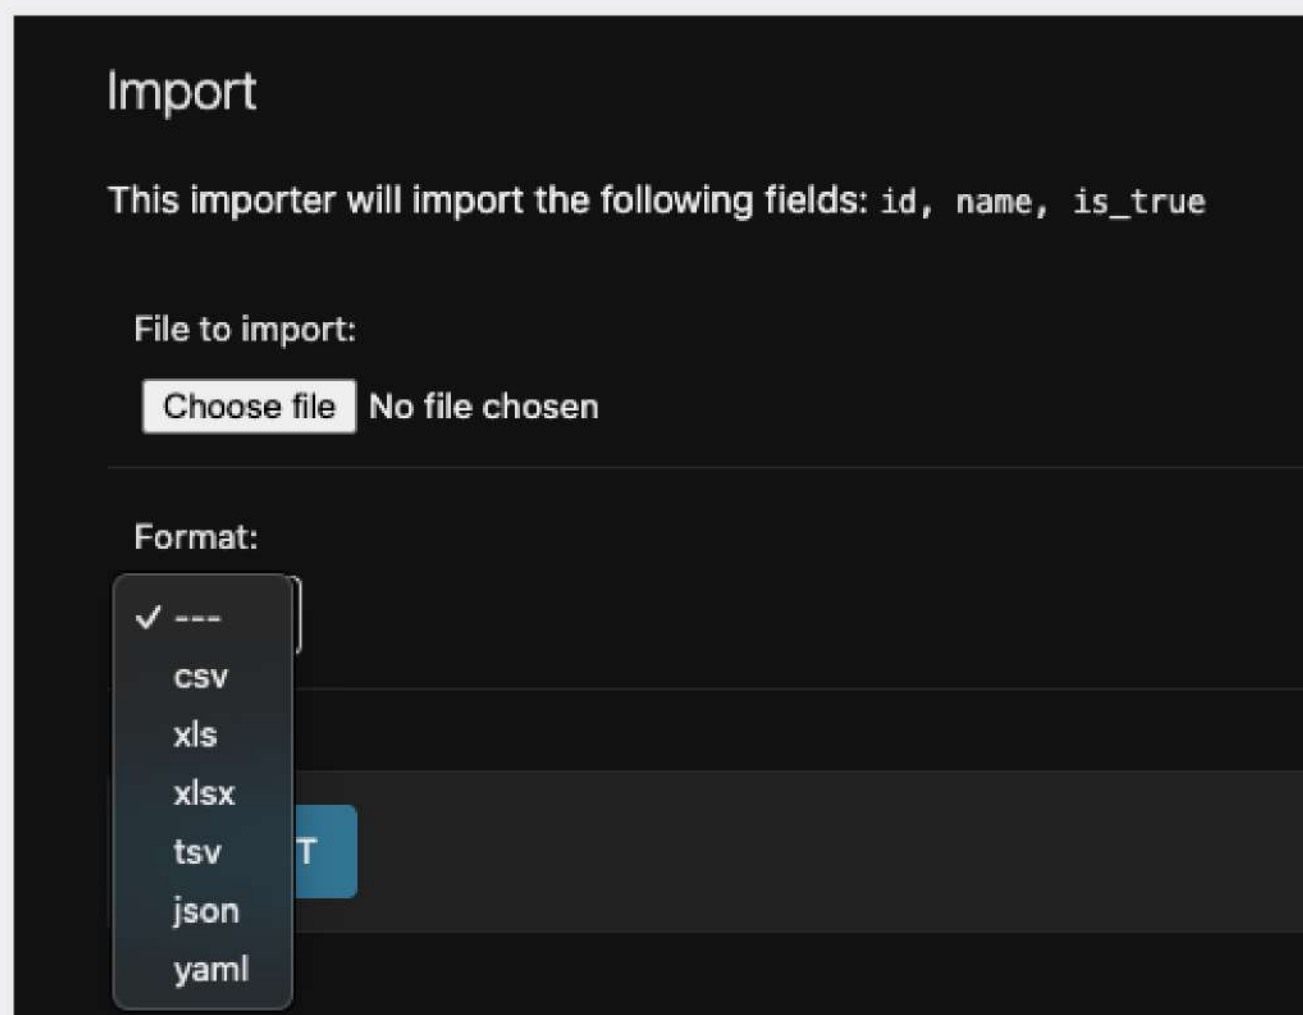

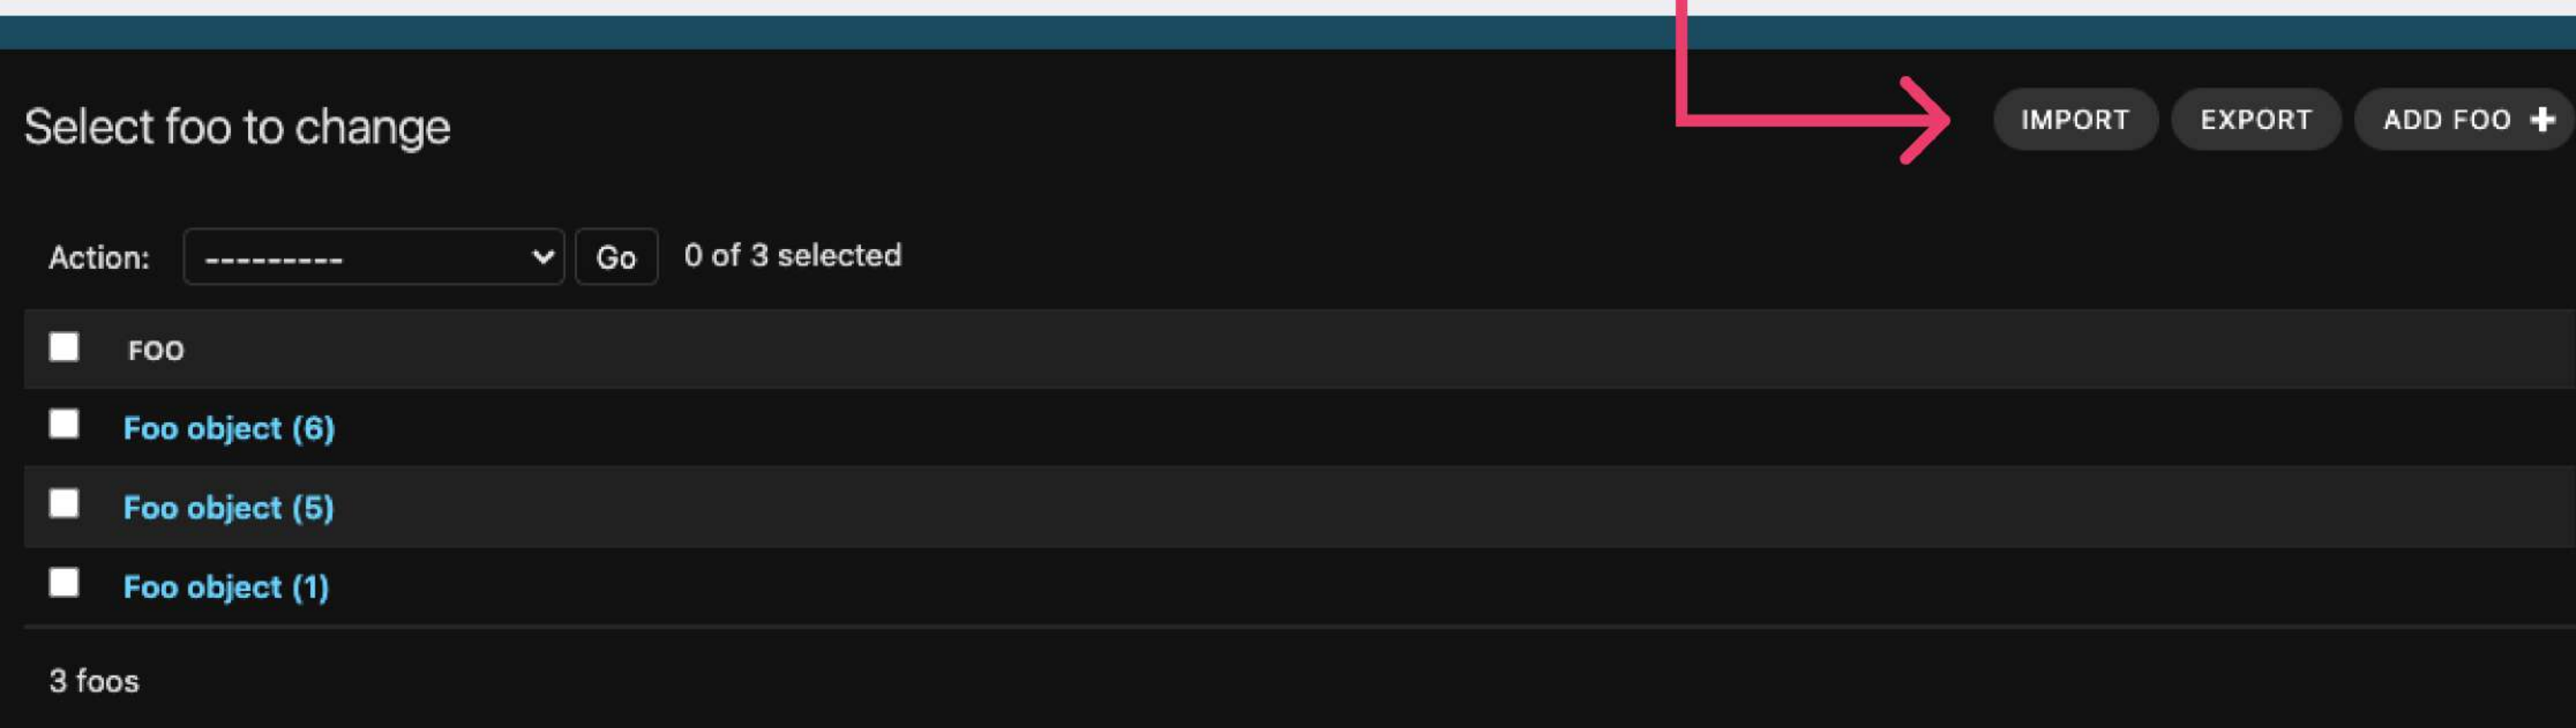

from django.contrib import admin
from .models import Foo
from import_export.admin import ImportExportModelAdmin

@admin.register(Foo)
class BookAdmin(ImportExportModelAdmin):
    pass
```

Inherit
ImportExportModel
Admin instead of
ModelAdmin

5. Open django admin

Open django admin and here inside model you can see import & export options.
